

## Selecting the best virtualization solution for your customers' business

Building a virtualised environment will require the implementation of several key technologies from multiple vendors. Logix Belux has partnered with world class vendors and has carefully selected a range of products and services to support effective virtualization strategies. The following products can be mixed and matched to address some or all aspects of a virtualized infrastructure:

1 Server Virtualization			
Core Architecture	Server Vendors	Terminals & Thin Clients	Deployment & Management
<b>CITRIX partner</b> Distributor	<b>IBM Business Partner</b>	<b>WYSE</b>	<b>symantec.</b> <b>Avocent</b>

2 Storage Virtualization		
SAN & Tape Virtualization	Storage & Fabric Vendors	Data Management & Availability
<b>IBM Business Partner</b> <b>Overland STORAGE</b>	<b>IBM Business Partner</b> <b>Overland STORAGE</b>	<b>symantec.</b> <b>Double-Take Software</b> <b>IBM Tivoli software</b>

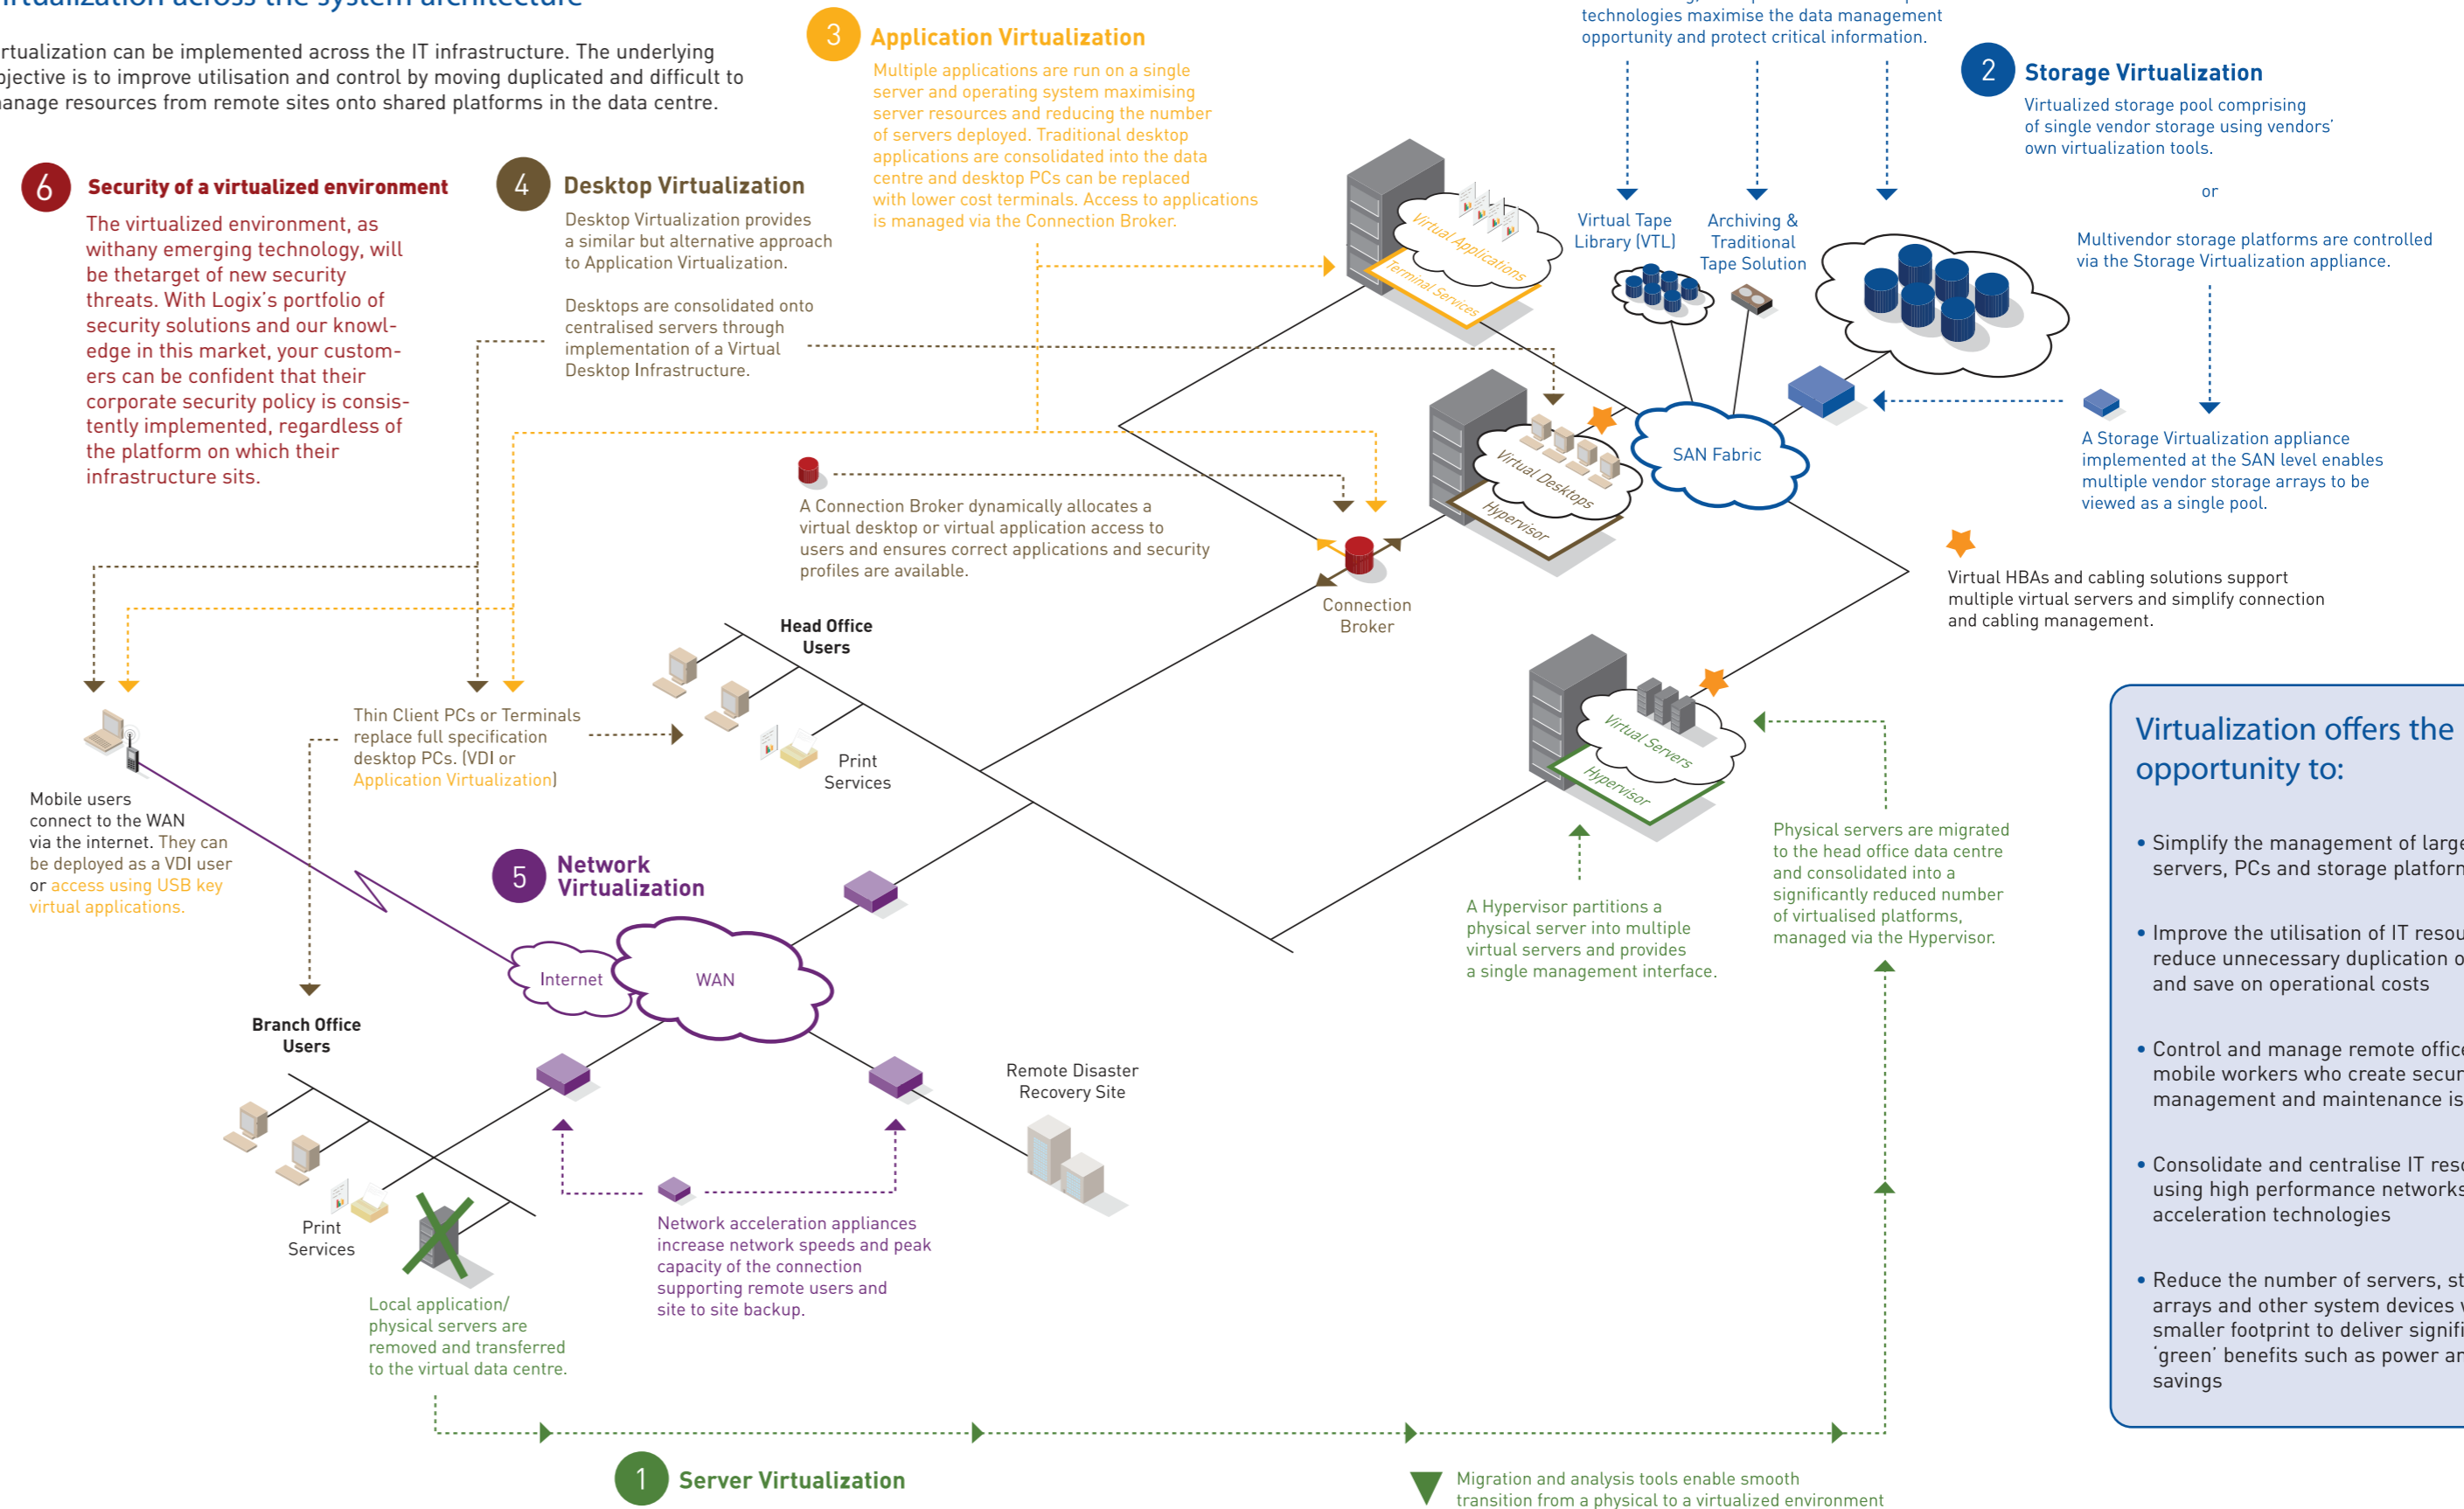

3 Application Virtualization		
Core Platforms	Terminals & Thin Clients	Deployment, Management & Availability
<b>CITRIX partner</b> Distributor	<b>WYSE</b>	<b>CITRIX partner</b> Distributor <b>symantec.</b> <b>IBM WebSphere software</b>

4 Desktop Virtualization			
Core Platforms	Connection Brokers	Terminals & Thin Clients	Deployment & Management
<b>CITRIX partner</b> Distributor	<b>CITRIX partner</b> Distributor	<b>WYSE</b>	<b>CITRIX partner</b> Distributor <b>WYSE</b> <b>symantec.</b>

5 Network Virtualization		6 Security of a virtualized environment	
<b>STONESOFT</b> Real World Business Security	<b>CITRIX partner</b> Distributor	<b>STONESOFT</b> Real World Business Security	<b>symantec.</b> <b>TREND MICRO</b>
		<b>IPSWITCH</b> <b>IBM Tivoli software</b>	<b>Avocent</b> <b>VASCO</b> <b>IBM Business Partner</b>

## Virtualization across the system architecture

Virtualization can be implemented across the IT infrastructure. The underlying objective is to improve utilisation and control by moving duplicated and difficult to manage resources from remote sites onto shared platforms in the data centre.

- Virtualization offers the opportunity to:**
- Simplify the management of large estates of servers, PCs and storage platforms
  - Improve the utilisation of IT resources, reduce unnecessary duplication of devices and save on operational costs
  - Control and manage remote offices and mobile workers who create security, management and maintenance issues
  - Consolidate and centralise IT resources using high performance networks and acceleration technologies
  - Reduce the number of servers, storage arrays and other system devices with a smaller footprint to deliver significant 'green' benefits such as power and cooling savings
